HIGHLIGHTS

- 20 patients (27-72 years) with urinary incontinence (UI) symptoms accompanied by erectile dysfunction (ED) were analyzed.
- All patients received 10 procedures of 28 minutes, delivered once a week.

Results immediately after the treatment:

- Urinary incontinence (International Prostate Symptom Questionnaire).
 - **46%** Improvement in **nocturia** (frequency of nighttime urination).
- Erectile dysfunction (International Index of Erectile Dysfunction).
 - **37%** improvement in **maintaining erection** during intercourse.
